

Quantitative Analysis of Adult Progenitor and Neural Stem Cell Differentiation
into Neurons
by
Matthew Jeffrey Roberson
B.S. (University of Michigan, Ann Arbor) 2001

A dissertation submitted in partial satisfaction of the
requirements for the degree of
Doctor of Philosophy
in
Chemical Engineering
in the
Graduate Division
of the
University of California, Berkeley

Committee in charge:
Professor David V. Schaffer, Chair
Professor Jay Kinsinger
Professor Adam Arkin
Fall 2007

Quantitative Analysis Of Adult Progenitor And Neural Stem Cell Differentiation Into Neurons

Author : / **Category :**Uncategorized / **Total Pages :** 213 pages

 [Download Quantitative Analysis Of Adult Progenitor And Neural Stem Cell Differentiation Into Neurons PDF](#)

Summary : Free quantitative analysis of adult progenitor and neural stem cell differentiation into neurons pdf download - neural stem cells derived from the adult hippocampus were used to explore the regulation of the bhlh transcription factor mash1 we found that fgf-2 through ck2 positively while retinoic acid negatively regulated mash1 expression mash1 expression specifies a pan-neuronal cell fate but signals such as retinoic acid can modify phenotypic specification additionally mash1 targets the expression of hes6 and neurod1 though neurod1 is only upregulated in the absence of fgf-2

Pusblisher : ProQuest on 2007 / **ISBN :** 9780549531791
